

INFORMATION SHEET

MARKING SIGNS ON IMPEX[®] – POLYCARBONATE PLATE WITH SUCTION CUPS

GENERAL INFORMATION

The marking sign is made of high-quality reflective film (reflectivity class RA1/A), which is applied to an IMPEX[®] polycarbonate plate from German manufacturer 3A Composites. Therefore, the marking sign combines the reflectivity and durability of the reflective film with the non-breakable and lightweight properties of the polycarbonate plate.

MOUNTING INSTRUCTIONS

The suction cups must be pressed onto a smooth, clean and dry surface in order to be able to provide maximum adhesion. Therefore, please clean the surface where you would like to install the marking sign with a wet cloth and rub it dry. Thanks to the suction cups, the marking sign can be attached and detached easily and quickly. We recommend to instal the marking sign inside the vehicle. If it is attached outside, the car should not be moved in order to prevent the loss of the sign (this does not apply to blind spot signs used in France - angles morts).
