

PRODUCT INFORMATION **REFLECTO** **REFLECTIVE FABRIC 3011**

PRODUCT DESCRIPTION

Reflecto Reflective Fabric 3011 is made from 3M™ Scotchlite™ which is a high-brightness pressure sensitive adhesive (PSA) backed reflective material. It is composed of colour-coated wide-angle retroreflective glass beads attached to a cloth fabric. The reflective side is exposed, and the adhesive material is covered with a protective carrier film.

FIELDS OF APPLICATION

- hard surfaces - such as protective helmets, water bottles, metal bicycle frames, running shoes, eyewear, stationary obstacles
- fabric surfaces – such as outdoor jackets, dog collars, backpacks, luggage, rain gear
- great alternative to sew-on and iron-on patches
-
- excellent for retrofitting existing products for enhanced visibility
- can be used as a design element on a garment

For most effective visibility, product should be applied on all sides of the object.

APPLICATION INSTRUCTION

- peel off the protective carrier film and apply the adhesive side to the desired surface
- apply firm pressure
- recommended application temperature is higher than 18°C to achieve best results
- proper bonding may not occur unless adhesive and surface material are above 18°C

Note: When applying pressure sensitive adhesive films to any surface, be sure that the surface is free from oil or other surface contaminants such as powder, dust or release agents. Adhesive performance should be carefully checked when used on substrates containing plasticizers.

To make sure the adhesive is compatible with the fabric or material you want to stick the film to, you can use a small piece of the reflective fabric and stick it to the inside of the garment or to an inconspicuous spot of the object. Most materials will not be damaged by this.
